

HOW DOES GOPHISH AND NGROK WORK TOGETHER.

GOPHISH: This is a tool used to create phishing Emails and landing pages, it manages campaigns, sends Emails and tracks metrics such as, who opens an Email or who clicked a link.

NGROK: This is a tool tha creates a secure tunnel to the open internet, that allows the link you generate with Gophish to function like a public url.

These tools work in a setup together because Gophish serves as a local web server that carries the links and web pages but because they're local on your device they cannot access the public internet, Ngrok acts as a link that securely creates a private connection between the links on Gophish and the open/public internet.
